

Construction Update

Week of | 12/11/2015

Site Activity | Deep Dynamic Compaction & Vibration Monitoring

Please be advised that work will be occurring onsite at Skyland Town Center this Saturday, December 12th from approximately 7am to 4pm. The required permits have been obtained.

Additionally, please be advised that deep dynamic compaction (DDC) work will re-commence Monday, December 14th at approximately 8am. This work will continue through the week, ending Friday, December 18th. DDC will then halt, and start again in 2016.

On Monday at the start of DDC, we will have engineers walking the adjacent streets with handheld vibration monitors to take readings at specific points within the adjoining neighborhoods. This will be in addition to our onsite, 24/7 monitoring already in place.

Thank you for your continued patience as we work to construct Skyland Town Center.
